

Project

Training Institute Management System

Student Name: Sandesh Dixit

College: MES Aabasaheb Garware College

Roll No.: 20988

Subject: DBMS

Abstract

This project manages students, trainers, courses, batches, enrollments, attendance and assessment results using MySQL.

Objectives

Manage students, trainers, courses, batches, attendance and reports.

Modules

Student, Trainer, Course, Batch, Enrollment, Attendance, Assessment Result.

SCOPE OF THE PROJECT

The scope of the Training Institute Management System includes:

- Student Registration
- Trainer Management
- Course Management
- Batch Management
- Enrollment Management
- Attendance Tracking
- Assessment Result Management

- Report Generation
- Database Backup and Record Maintenance

PROPOSED SYSTEM

The proposed Training Institute Management System is developed using **MySQL Database**.

It automates all institute activities and stores information in relational tables.

Features

- Student Registration
- Trainer Information
- Course Management
- Batch Creation
- Student Enrolments
- Attendance Management
- Assessment Results

Database create

Show query box

✓ MySQL returned an empty result set (i.e. zero rows). (Query took 0.0009 seconds.)

```
USE TrainingInstitute;
```

[Edit]

The screenshot shows the phpMyAdmin interface with the 'traininginstitute' database selected. The 'Structure' tab is active, displaying the SQL queries for creating the 'Student' and 'Trainer' tables.

```
1 -- Student Table
2 CREATE TABLE Student (
3     StudentID INT PRIMARY KEY AUTO_INCREMENT,
4     Name VARCHAR(100) NOT NULL,
5     Email VARCHAR(100) UNIQUE,
6     Phone VARCHAR(15),
7     DOB DATE
8 );
```

```
1 -- Trainer Table
2 CREATE TABLE Trainer (
3     TrainerID INT PRIMARY KEY AUTO_INCREMENT,
4     Name VARCHAR(100) NOT NULL,
5     Expertise VARCHAR(100),
6     Email VARCHAR(100) UNIQUE
7 );
```

```

1  -- Batch Table
2  CREATE TABLE Batch (
3      BatchID INT PRIMARY KEY AUTO_INCREMENT,
4      CourseID INT,
5      TrainerID INT,
6      StartDate DATE,
7      EndDate DATE,
8      FOREIGN KEY (CourseID) REFERENCES Course(CourseID),
9      FOREIGN KEY (TrainerID) REFERENCES Trainer(TrainerID)
10 );

```

```

1  -- Enrollment Table
2  CREATE TABLE Enrollment (
3      EnrollmentID INT PRIMARY KEY AUTO_INCREMENT,
4      StudentID INT,
5      BatchID INT,
6      EnrollmentDate DATE,
7      FOREIGN KEY (StudentID) REFERENCES Student(StudentID),
8      FOREIGN KEY (BatchID) REFERENCES Batch(BatchID)
9  );

```

```

1  -- Attendance Table
2  CREATE TABLE Attendance (
3      AttendanceID INT PRIMARY KEY AUTO_INCREMENT,
4      EnrollmentID INT,
5      Date DATE,
6      Status ENUM('Present','Absent'),
7      FOREIGN KEY (EnrollmentID) REFERENCES Enrollment(EnrollmentID)
8  );

```

```

1  -- AssessmentResult Table
2  CREATE TABLE AssessmentResult (
3      ResultID INT PRIMARY KEY AUTO_INCREMENT,
4      EnrollmentID INT,
5      ExamDate DATE,
6      Score DECIMAL(5,2),
7      FOREIGN KEY (EnrollmentID) REFERENCES Enrollment(EnrollmentID)
8  );

```

Insert Sample Data

✓ 5 rows inserted.

Inserted row id: 10 (Query took 0.0131 seconds.)

```

INSERT INTO Student (Name, Email, Phone) VALUES ('Riya', 'riya@gmail.com', '9876543210'), ('Amit', 'amit@gmail.com',
'9876501234'), ('Sneha', 'sneha@gmail.com', '9876512345'), ('Karan', 'karan@gmail.com', '9876523456'), ('Pooja',
'pooja@gmail.com', '9876534567');

```

TRAINING INSTITUTE MANAGEMENT SYSTEM – ER DIAGRAM

Report Structure

- **Objective:** Manage training institute data.
- **ER Diagram:** Show relationships between tables.
- **Queries & Outputs:** Screenshots of above queries.
- **Insights:**
 - **Most enrolled course = Python Basics & Machine Learning.**
 - **Batch 2 has highest average score.**
 - **Riya has low attendance (50%).**
 - **Amit is top performer**

Relationships

- Student ↔ Enrollment (1-to-many)
- Batch ↔ Enrollment (1-to-many)
- Course ↔ Batch (1-to-many)
- Trainer ↔ Batch (1-to-many)
- Enrollment ↔ Attendance (1-to-many)
- Enrollment ↔ AssessmentResult (1-to-many)

ADVANTAGES

Easy to use Reduces paperwork.

Improves data accuracy.

Fast report generation.

Secure data storage.

Reduces duplicate records.

Saves time.

Better data management.

Easy data retrieval.

Supports future expansion

FUTURE SCOPE

Future improvements can include:

Online Student Registration

Online Fee Payment

SMS & Email Notifications

Faculty Login

Student Login

Mobile Application

Attendance using QR Code

Cloud Database Integration

AI-based Performance Analysis

Dashboard with Charts and Analytics

CONCLUSION

The Training Institute Management System is a database application developed using MySQL. It helps manage students, trainers, courses, batches, attendance, and assessment results efficiently.

The project demonstrates practical implementation of DBMS concepts such as:

Primary Key

Foreign Key

SQL Queries

Joins

Aggregate Functions

Views

Window Functions

Relational Database Design

This system improves efficiency, reduces manual work, minimizes errors, and provides quick access to information.
